# Eurofinish

## Premium Colors

Today's contemporary designs and classic craftsman style architecture favor deep rich colors. The Coeur d'Alene Window Company now offers low gloss matte finished Euro-black and Euro-brown to upgrade the look and feel of your windows. RoyalBond finishes allow you to add deep rich color to enhance the look of any architectural style.

The Coeur d'Alene Window Company conducts frequent tests to ensure finish adhesion is sound. Royal Bond Spectra-Coat™ is a well-tested and field-proven vinyl window/door coating system that provides outstanding protection against all weather conditions without peeling, flaking or cracking. This revolutionary high performance waterborne polyurethane coating has been specifically designed for application to vinyl, assuring long lasting durability and customer satisfaction. Coatings are tested to ASTM 4803 for durability and heat absorption.

# Adding Premium Finishes the Right Way .....

At The Coeur d'Alene Window Company, our primary focus is always on providing you with the best solution to your window and door needs. Adding colors to vinyl windows can be accomplished in a variety of ways. Some companies apply foils or finishes prior to building the window. Although this can reduce labor, it often limits color selection and product availability. Other manufacturers ship their windows across town, state or region to a third-party finisher. Although this may reduce costs and capital outlay, it also means that your windows are handled multiple times before they reach your home. This can lead to damage and delayed deliveries. At The Coeur d'Alene Window Company, we apply our finishes on our own state-of-the-art finishing line.

## The Coeur d'Alene Advantage

Controlling our process from window manufacture to finishing allows us to consistently provide windows of high quality. If a problem occurs, Coeur d'Alene addresses it. You don't get sent from contractor to supplier to manufacturer to paint company only to find everyone pointing at someone else.

.....

.....

.....

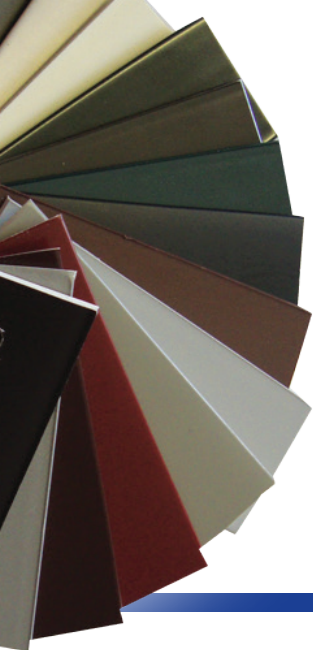

## Our Process .....

Our finishing process includes a pre-clean and preparation station to ensure your window is ready to be finished. Next, your window enters our filtered finishing room where our new Euro-finishes or RoyalBond Coatings are applied. Next, the finish is cured to improve adhesion under intense heat and then the windows are stored to complete the drying process. Finally, the windows are shipped with a protective film applied over the finish to protect the window on its journey to you.

Please see our warranty for additional details...

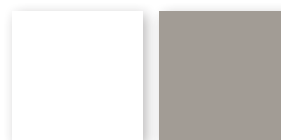

## EXTERIOR COLORS

Coeur d'Alene Windows come in four standard exterior colors, including white, adobe, black and bronze. In addition, we offer numerous custom color options.

The Coeur d'Alene Window Company

\*Please review actual color samples prior to selection.

## INTERIOR COLORS

Our windows are available in two popular interior colors, white and adobe. Or choose one of our finish colors to bring bold color inside.

## Color Selection Sheet

RoyalBond™ Spectra Coat Waterbourne Paint is a field-proven vinyl window/door coating system that withstands all weather conditions without cracking, peeling or flaking & is available in 26 standard colors.

\*RB7003 White & RB9001 Silver Metallic are not shown on this Color selection sheet due to the inaccurate reproduction in these color spaces, please use our Color Guide Swatches for reference.

\*\* Colors may vary due to differences in printer & monitor color settings, for exact color matching please contact Royal Window & Door Profiles and request a RoyalBond Spectra-Color Guide.
